Bello Sheu Ibrahim

FULL-STACK SOFTWARE ENGINEER · TECHNICAL LEAD

Lagos, Nigeria · sheuibrahimb@gmail.com · +234 707 234 6284 · belloibrahim.vercel.app · github.com/belloibrahv

Summary

Full-stack engineer and Technical Lead with **6+ years** shipping production systems in TypeScript, Next.js, NestJS and PostgreSQL. In 2026 I took **three platforms from first commit to live production**: a transport-booking marketplace, a multi-branch retail POS, and a cooperative finance SaaS. Strongest in payments, multi-tenant security, financial correctness and fast client delivery.

Skills

LANGUAGES	TypeScript, JavaScript, Python, PHP, SQL
FRONTEND	React 19, Next.js 15/16 (App Router), TanStack Query, Zustand, Tailwind CSS, PWA (Serwist, IndexedDB)
BACKEND	Node.js, NestJS, Fastify, Express, Laravel, Django, REST API design, BullMQ
DATA	PostgreSQL (row-level security), Prisma, Drizzle, MySQL, Redis
SECURITY	2FA, role-based access control, Better Auth, NextAuth, OWASP penetration testing
PAYMENTS & APIS	Paystack, Google Maps Platform, Termii, Africa's Talking, Prembly, Resend
DEVOPS & TESTING	Docker, Caddy, VPS, Railway, Vercel, Turborepo, CI quality gates, Vitest, Playwright

Experience

Technical Lead & Full-Stack Engineer · TechVaults Limited

2019 – PRESENT

Lagos, Nigeria

Longest-serving engineer. Lead the engineering team and own delivery for enterprise clients in healthcare, finance and education, plus TechVaults' own SaaS products.

StockVaults · multi-branch inventory, POS and accounting platform — SEP 2026 – PRESENT

- Built and deployed it end to end in **7 weeks** (73,000 lines of TypeScript, 44 data models). Live at a multi-shop electronics retailer and now sold as white-label SaaS with a separate deployment per customer.
- Built an **offline-first POS** (Serwist, IndexedDB) that queues sales and syncs on reconnect, so shops keep selling through network outages.
- Tracked every unit by IMEI or serial number across its full life: purchase, transfer, sale, return, trade-in, repair and return to supplier.
- Built the finance layer: payables, receivables, split payments, daily close and cash reconciliation, with **10-role access control**, branch-level data isolation and a full audit trail.
- Wrote 8 automated integrity checks that run against live data to confirm figures agree on every screen.

Cooperative Vaults · multi-tenant SaaS for cooperative societies — OCT 2026 – PRESENT

- Built a **double-entry accounting engine** with integer kobo amounts, gap-free numbering, an append-only ledger and a tamper-evident audit chain.
- Isolated tenant data with **PostgreSQL row-level security** through a restricted database role, backed by 24 migrations of database guardrails.
- Added **maker-checker approvals** so no single officer can move money or grant themselves approval rights.
- Delivered loans, payroll deductions with remittance reconciliation, financial statements, year-end close and a member self-service portal.
- Covered the domain with 98 unit tests, database integration tests and a 73-check Playwright end-to-end run.

Team leadership & client delivery

- Lead planning, architecture and sprints across concurrent client projects, including **Custodian PLC**.
- Set team standards for Git workflow, code review and documentation, and mentor interns and junior developers.
- Run OWASP-based penetration tests on client applications and drive fixes before release.
- Lifted client online transactions by **up to 30%** and MySQL query speed by **up to 40%** through performance work.

Experience, continued

Frontend Engineer (Contract) · National Nutrition Budget Tracking System

NOV 2025 – PRESENT

Remote

Federal platform for tracking nutrition budget allocation and spending across Nigeria. Sole frontend engineer.

- Built the full Next.js 16 and TypeScript app with role-based access for **3 user roles**, enforced in both UI and API.
- Built dashboards over 1,000+ row datasets with server-side pagination, filtering and CSV import and export.
- Implemented NextAuth v5 with session monitoring and auto-logout, and validated 15+ API integrations with Zod.
- Reached **sub-2-second page loads** and a **90+ Lighthouse accessibility** score through code splitting, lazy loading and memoisation.

Full-Stack Engineer (Contract) · JekaGo Technologies

JUN 2026 – OCT 2026

Lagos, Nigeria · jekago.com

Intercity bus booking and private-ride platform, now live. Took it from first commit to launch.

- Delivered in **about 3 months**: a Next.js web app (130+ pages) and a NestJS API (480+ endpoints across 23 modules), 970+ commits.
- Designed the PostgreSQL data model (71 Prisma models, 107 migrations) and kept staging and production schemas in sync.
- Integrated **Paystack** for checkout, wallet top-ups and instant per-booking operator payouts, all behind approval controls.
- Built JekaGo Ride: Google Places search, route maps, fare guides, nearby-driver matching and live trip tracking with shareable links.
- Ran production on a VPS with Docker and Caddy: scripted deploys with backups and health checks, staging for client testing, and a pre-push gate of lint, type-check, **2,100+ tests** and build.

STACK TypeScript, Next.js 15, React 19, NestJS 11, Prisma, PostgreSQL, Redis, TanStack Query, Turborepo, Docker, Caddy

Frontend Engineer · Varuna Inc.

2023 – 2024

Remote · Texas, USA

Real-time water monitoring for utility operators.

- Co-led the rebuild of a legacy frontend in React, Zustand, MUI and React Query, improving rendering performance by **50%**.
- Integrated live sensor data APIs and led code review and refactoring that sped up delivery.

Projects & Open Source

- **TrustEscrow NG:** SMS-based escrow for Nigerian peer-to-peer commerce (Fastify, PostgreSQL, Redis, BullMQ, Paystack, Africa's Talking, Prembly) with multi-provider AI routing and 132/132 passing tests.
- **Open source:** pull requests to Hedera JSON RPC Relay (#3154), Hiero Ledger website (#17) and OpenElements Hedera Enterprise (#61). Contributor to CocoIndex.

Education

- **B.Sc. Computer Science**
  Edexcel University, Benin · 2016 – 2019
- **Google Africa Developer Scholarship**
  JavaScript & Responsive UI · 2018
- **Google Developer Group Lagos**
  Organiser and technical support lead, events of 2,000+ attendees
